Estimates of Aman Rice, 2009-2010

Introduction

Aman is an important crop in Bangladesh for its huge production. This year, at the sowing period, favourable weather condition, electricity management and stable market position helped the farmers to bring more area under aman crop.

The weather condition was reasonably pretty at sowing stage. Late monsoon throughout the country brought low lying area under aman crop. For this reason the coverage area raised substantially. More over government attitude towards irrigation was keen. Government paid complete attention on rural electricity management system throughout the country and offered free irrigation to the northern part of Bangladesh. Aman is a nature based crop. Some casualty occurred in some of the regions due to start of late monsoon. Apart from this the weather was quite satisfactory from plantation through harvesting stage of the crop. Comparing the results of last two successive years, it reveals that farmers were interested to grow High Yielding Variety (HYV) rather than local variety.

Area:

Total area under aman crop has been estimated at 5.66 million hectares this year as compared to 5.50 million hectares in the last year which is 3.01 percent higher. Estimates of total area of this year as well as the last year by variety are as follows:
