## Estimates of Potato, 2015-16

### Introduction

Potato is a prominent crop in consideration of production and its internal demand in Bangladesh. Potato cultivation has been getting popular over the last couple of years. The weather condition for potato cultivation was favourable during the sowing, growing and harvesting period of the survey year 2015-16. The area of local variety declined slightly with regard to previous year. It was found that the farmers were interested to grow more high yielding variety.

In a subjective manner, farmers were interviewed on some points relating to management and distribution system of seed and fertilizer. They opined that proper management and timely distribution of seed and fertilizer led to a substantial higher production this year. At the same time no natural calamity was reported during potato cultivation and its harvesting. As a result, the area and yield rate has significantly increased, which contributed 2.38% increase in total volume of production.

### Area

Total area under potato crop has been estimated 11,74,978 acres (4,75,488 hectares) compared to 11,63,921 acres (4,71,013 hectares) of the last year. A comparative area estimates of potato are shown below:

### Estimates of Total Area of Potato Crop by Type
